Projects:

Palo - Real-time queue management and multi-booking slot system with SMS reminders. Production-ready platform integrating a web admin dashboard with a FastAPI backend and automated SMS notifications.

E-Voting - Secure voting interface built with Django and SQLite with real-time result calculation. Features administrative panels, voter authorization lists, real-time result calculations, and encryption to ensure ballot integrity.

Care Connect - A healthcare platform matching critical patients with local services. A platform developed in React and Node.js during a 36-hour hackathon providing health care service to pregnant women living in remote area through SMS.

Diabetes Health Checker - ML classifier predicting diabetes probability with a responsive Streamlit dashboard. Analyses patient metrics glucose, blood pressure, and insulin using a trained ML classifier to predict diabetes probability with visual charts.

Self-Healing Database - Fault-tolerant database wrapper with automatic replication and zero down-time. Automatically detects node failures, triggers data replication protocols, and restores backups with zero system down-time for maximum resilience.

Technical Skills:

Languages: Python, C, C++,

Frontend: React, HTML, CSS, Tailwind, Typescript

Backend: Django, Node.js, FastAPI

Database: Firebase, MongoDB, PostgreSQL, MySQL, SQLite

Education:

Bachelor's in computer engineering – Pathivara Centre for Advance Studies (2022 – Present).

+2 (Higher School) – Shree Devi Mavi

School Level – Little Angels' English School

Certifications:

ACES Techfest Hackathon v7.0

IIC QUEST Hackathon 4.0
